

**Keyless**

Efficient keyless system for quick fin installation and release.

**Mechanism: Rotating Barrel**

Self lubricating, wear resistant barrel locks the fin into the plug.

**Mechanism: Titanium Rod**

Aerospace grade titanium rod applies lateral pressure to the fin tab.

**Backward Compatible**

Grub screws can be inserted to accept your existing FCS fins.

**Honeycomb Construction**

Lightweight composite frame encapsulated by high density foam reduces weight and maintains tail flex.

**Flush Leading Edge**

Recessed leading edge with flush base connection improves water flow.

**FCS II represents the very latest in detachable fin system technology and performance.**

The system has been designed to perform at the highest level by seamlessly connecting three essential elements in surfing; the surfer, the surfboard and the fins.

When paired with fins from the new FCS II Essential Series, it's now possible to install and remove your fins in seconds, without the need for any screws or tools.

What you'll find when you ride the new FCS II system is more speed, more drive, more acceleration, and most importantly more response from your board. This equates to better surfing.

Our team riders have given the new FCS II system their personal tick of approval, which is validation from the best surfers on the planet.
